

SUBJECT INDEX

A

abstract lightsource models 76
abstract solids 19
acceleration of ray tracing
adaptive space partitioning 249
heuristic methods 242
partitioning of ray space 253
ray classification 254
ray coherence 256
regular space partitioning 242
adaptive supersampling 322
affine point 102
affine transformation 105
algorithm theory 31
aliasing 7, 309
 temporal 401
ambient light 76, 80
analytical shading models 78
animation 365
 non real-time 366
 real time 366
anti-aliasing 218, 309
 lines 314, 317
 post-filtering 321
 regions 314
 temporal 401
aperture 262
approximation function 378
approximation of roots 151
 algebraic equations 153

halving method 151
isolation 154
method of chords 151
Newton's method 152
reducing multiplicity 153

B

B-spline
 cubic 382
back clipping plane 16, 117
baricentric coordinates 108, 149
beam 6
beam of rays 255
Beckmann distribution 71
bi-directional reflection function 62
bi-directional refraction function 62
bi-level devices 8
binary space partitioning 184
black-and-white devices 8
blue noise 323, 330
blur 401
boundary evaluation 91
boundary representations (B-rep) 21
bounding box 142
box filter 311
bp 117
Bresenham's line generator 49
BSP-tree 184
bump mapping 360, 362
 filtering 363

C

camera 14, 115
 camera parameters 115
 canonical view volume 121
 cathode ray tube (CRT) 5
 channels 223
 child segment 396
 CIE XYZ 54
 circle of confusion 263
 clipping 15, 77, 130

- Cohen-Sutherland 134
- coordinate system 141
- in homogeneous coordinates 131
- line segments 134
- points 133
- polygons 137
 - Sutherland–Hodgman 137
- clipping against convex polyhedron 139

 Cohen-Sutherland clipping 134
 coherent light-surface interaction 61
 coherent reflection 62
 coherent refraction 62
 collinearities 106
 color 53
 color index 224
 color matching functions 54
 comb function 307
 combinational complexity 42
 complexity 26
 complexity measures 26
 complexity of algorithms 27

- algebraic decision tree model 241
- asymptotic analysis 29
- average-case 33
- graphics algorithms 31
- input size 32
- key operations 29

linear equation 284
 lower bounds 28, 30
 notations 29
 optimal algorithms 29
 output size 32
 progressive refinement 288
 radiosity method 280
 storage 27
 time 27
 upper bounds 29, 30
 viewing pipeline 141
 worst-case 29
 cone filter 311
 constant shading 229
 constraint-based systems 398
 constructive solid geometry (CSG) 23
 continuity

- C^2, C^1, C^0 368

 control point 377
 convex hull 108, 383

- transformation 109

 CPU 7
 CRT 5
 cubic B-spline 382
 cubic spline 379

D

DDA line generator 45
 decision variables 48
 decomposition 220
 delta form factor

- cubic tetrahedron 282
- hemicube 280

 depth cueing 218, 220
 depth of field 262
 diffuse reflection coefficient 66
 digital-analog conversion 224
 directional lightsource 76
 display list 6

display list memory 221
display list processor 221
display processor 7
dither
 ordered 330
 random 330
dithering 218, 223, 231, 328, 329
division ratio 108
double-buffer animation 401
duality principle 103

E

environment mapping 363
Euler's theorem 142
EWA
 elliptical weighted average 357
extended form factor 291, 292
eye 14, 115

F

face 21
facet 221
FFT 313
field 13
filter
 box 311
 cone 311
 Gaussian 312
 ideal low pass 311
 low-pass 310
 pulse response 311
finite element method 265, 293
finite elements
 constant 294
 linear 299, 300
fixed point form 44
flicker-free 6
flood lightsource 76

flux 58
form factor 266
 extended 291, 292
 vertex-patch 289
 vertex-surface 288, 289
form factor calculation 270
 analytical 274
 geometric 273
 hemicube 277
 hemisphere 275
 randomized 270
 tetrahedron 281
 z-buffer 280
Fourier transform 308
fp 117
frame 6, 374
frame buffer 6, 223
 coherent access 223
 double access 224
frame buffer channels 223
frame buffer memory 8, 218, 232
Fresnel coefficients 61
 parallel 73
 perpendicular 73
Fresnel equations 73
front clipping plane 15, 117
functional decomposition 37
fundamental law of photometry 59

G

Gauss elimination 283
Gaussian distribution 71
Gaussian filter 312
geometric manipulation 17
geometric modeling 18
geometric transformation 99, 100
geometry engine 222
global element method 299, 304
global function bases 306

Gouraud shading 211, 218, 229
 in radiosity method 269
 graph 187
 straight line planar (SLPG) 187
 graphics
 2D 14
 3D 14
 graphics (co)processors 8
 graphics primitives 17, 81
 gray-shade systems 9

H

halftoning 328, 329
 halfway vector (\vec{H}) 68
 Hall equation 65
 hardware realization 41
 heap 201
 hemicube 277
 hemisphere 275
 hidden surface algorithms
 → visibility algorithms 143
 hidden surface problem 77
 hidden-line elimination
 z-buffer 229
 high-level subsystem 226
 homogeneous coordinates 101
 homogeneous division 104
 human eye 3

I

ideal plane 101
 ideal points 101
 illumination equation 65, 220
 illumination hemisphere 57
 image generation pipeline 226
 image reality 25
 incoherent light-surface interaction 61

incremental concept 43
 formula 44
 line generator 46
 polygon texturing 349
 shading 79, 203
 indexed color mode 9, 224
 input pipeline 226
 intensity 58
 interactive systems 26
 interlaced 13
 interpolation 377
 Lagrange 378
 spline 379
 interpolation function 377
 intersection calculations
 acceleration 240
 approximation methods 150
 CSG-objects 164
 explicit surfaces 157
 implicit surfaces 150
 ray span 166
 regularized set operations 165
 simple primitives 148
 interval arithmetic 159
 interval extension 160
 inverse geometric problem 372

J

jitter 322
 Gaussian 327
 white noise 326

K

keyframe 374
 keyframe animation 376
 kinematics 373
 knot point 377
 Krawczyk operator 163

k_r = coherent reflection coefficient 62
 k_t = coherent refraction coefficient 62
 k_d = diffuse reflection coefficient 66
 k_s = specular reflection coefficient 68

L

Lagrange interpolation 378
Lambert's law 66
lightsource 76
 abstract 76
 ambient 76
 directional 76
 flood 76
 positional 76
lightsource vector (\vec{L}) 61
line generator
 3D 228
 anti-aliased 314
 box-filtered 315
 Bresenham 49
 cone-filtered 317
 DDA 45
 depth cueing 228
 Gupta-Sproull 320
linear equation
 Gauss elimination 283
 Gauss-Seidel iteration 284
 iteration 283
linear set 107
linked segments 394
local control 381
local coordinate system 3
lookup table (LUT) 9, 224

M

Mach banding 212
manifold objects 23
metamers 55

microfacets 69
micropolygons 359
mip-map scheme 355
model access processor 221
model decomposition 17, 81
 B-rep 89
 CSG-tree 91
 explicit surfaces 83
 implicit surfaces 87
modeling 17
modeling transformation 15, 216
motion
 hierarchical 394
 interpolation 368
motion blur 264, 401
motion design 372
multiplicity of roots 153

N

Newton's law 367
non-interlaced 13
non-manifold objects 23
normalizing transformation
 parallel projection 121
 perspective projection 123
Nyquist limit 310

O

$O(\cdot)$ (the big- O) 30
object coherence 242
object-primitive decomposition 15
octree 250
ordered dithers 330
orthonormal matrix 369
output pipeline 226
output sensitive algorithm 32, 193
overlay management 231
own color 10, 16, 67

P

parallelization 35
 image space 39
 object space 40
 operation based 37
 primitive oriented 40
parameterization 334
 cylinder 338
 general polygons 342
 implicit surfaces 337
 parametric surfaces 336
 polygon mesh 342
 polygons 339
 quadrilaterals 340
 sphere 337
 triangles 340
 two-phase 344
 unfolding 342
parent segment 396
patch 21
perspective transformation 126
Phong shading 212
Phong's specular reflection 67
photorealistic image generation 80
pipeline
 input 226
 output 226
 viewing 139
pixel 5
pixel level operations 218
pixel manipulation 17
point sampling 260
Poisson disk distribution 322
positional lightsource 76
post-filtering 309
pre-filtering 309
primitives 17
priority 16

problem solving techniques
 brute force 240
 divide-and-conquer 89, 91, 96, 165,
 177
 event list 175
 generate-and-test 94, 251
 lazy evaluation 255
 locus approach 254
 output sensitive 195
 sweep-line 194, 198
progressive refinement 285
 probabilistic 289
projection 119, 124
 oblique 116
 orthographic 116
 parallel 116
 perspective 116
 spherical 275
projective geometry 100
pseudo color mode 9, 224
PSLG representations
 DCELS 23

Q

quantization 327
quaternions 385

R

r-sets 21
radiant intensity 58
radiosity 58, 265
 equation 267
 method 79, 269
 non-diffuse 290
random dither 330
raster graphics 6
raster line 6
raster mesh 6

- raster operation ALUs 224
raster operations 218, 223
 XOR 218
ray coherence 256
ray shooting problem 241
ray tracing 235
 aperture 262
 blurred (fuzzy) phenomena 260
 blurred translucency 262
 circle of confusion 263
 depth of field 262
 distributed 260, 402
 gloss 262
 illumination model 235
 motion blur 264
 penumbras 262
 recursive 235
 shadow rays 238
 simple (first-order) 146
real-time animation 366
reciprocity relationship 267
recursive ray tracing 79
reflection mapping 363
refresh
 interlaced 13
 non-interlaced 13
regular sets 19
regularized set operations 20
relaxation technique 399
rendering equation 65
representation schemes 21
 B-rep 21
 CSG 23
resolution 12
Ritz's method 294
Rodrigues formula 112
roll-pitch-yaw angles 111, 369
rotation 110
- sampling theorem 308, 310
scaling 110
scan conversion 6, 17, 220, 222
 3D lines 227
 triangle 229
scan converter 222
scan-lines 6, 174
scene 18
Schauder's fixpoint theorem 158
scientific visualization 400
scissoring 16
screen coordinate system 118
sectioning 139
segment 394
 hierarchy 396
 linked 394
 parent 396
set membership classification 91
shading 16, 77, 78
 coordinate system 141
 Gouraud 211
 incremental 79, 203, 211
 Phong 212
shading equation 65
shadow 204
shadow maps 205
shearing 113
shearing transformation 120, 123
SLPG representations
 adjacency lists 190
 DCELS 191
Snellius–Descartes law 62
solid angle 57
solid textures 335

- specular reflection
 Phong's model 67
 probabilistic treatment 69
 Torrance-Sparrow model 69
- specular reflection coefficient 68
- spline 379
 cubic 379
- stereovision 14
- stochastic analysis of algorithms
 Poisson point process 245
- regular object space partitioning

 parametric surface 345
 radiosity method 353
 ray tracing 345
 screen order 334
 solid textures 345
 texture order 334
- texture space 333
- Torrance–Sparrow specular refl. 69
- transformation
 affine 105
 coordinate system change 113
 geometric 100
 normalizing for parallel projection 121
 normalizing for perspective projection 123
 perspective 126
 rotation 110
 scaling 110
 shearing 113, 120, 123
 translation 110
 viewing 122
 viewport 122
- transformation matrix
 composite 216, 220
 modeling 216
 viewing 216
- translation 110
- translucency 221, 231
- translucency patterns 221, 231
- transparency 206, 231

tree traversal
 inorder 186
 postorder 186
 preorder 186
 tristimulus 53
 true color mode 8, 224
 Trunc 45

U

u, v, w coordinate system 115

V

variational method 294
 vector generator 6
 vector graphics 5
 vertex-surface form factors 288, 299
 video display hardware 223
 video refresh controller 10
 view plane normal 116
 view reference point 115
 view up vector 116
 view vector (\vec{V}) 61
 viewing pipeline 139
 viewing transformation 77, 122, 216
 viewport 14
 viewport transformation 122
 virtual world representation 17
 visibility 77
 visibility algorithms 143
 area subdivision 176
 back-face culling 167, 169
 BSP-tree 184
 depth order 181
 image coherence 176
 image-precision 143
 initial depth order 178, 182
 list-priority 180
 Newell–Newell–Sancha 182

object coherence 175
 object-precision 144
 painter's algorithm 181
 planar graph based 187
 ray tracing 146
 scan conversion 169
 scan-line 174
 visibility maps 188
 Warnock's algorithm 177
 Weiler–Atherton algorithm 178
 z-buffer 168

visibility computation 16
 coordinate system 141

visibility sets 258
 visible color 10
 voxel walking 251

W

weight functions 378
 white noise 326
 window 14, 115
 height 116
 width 116
 window coordinate system 115
 winged edge structure 23, 192
 wire-frame image generation 216
 world coordinate system 3
 world-screen transformation 15
 wrap-around problem 129

Z

z-buffer 218, 223
 z-buffer algorithm
 hardware implementation 170
 zoom 116
 γ -correction 10, 55, 224
 $\Omega(\cdot)$ (the big- Ω) 30
 $\Theta(\cdot)$ (the big- Θ) 30
